### DESCRIPTION

The M74HC692 is an high speed CMOS DECADE/COUNTER REGISTER (3 STATE) fabricated with silicon gate C<sup>2</sup>MOS technology. The internal circuit is composed of 3 stages including buffer output, which offers high noise immunity and stable output. This device incorporates a synchronous counter, four bit D-type register, and quadruple two-line to one-line multiplexers with three-state outputs in a single 20 pin package. The counter can be programmed from the data inputs and have enable P and enable T inputs and a ripple carry output for easy expansion. The register/counter select input, R/C, selects the counter when low or the register when high for the three state-outputs, QA, QB, QC, and

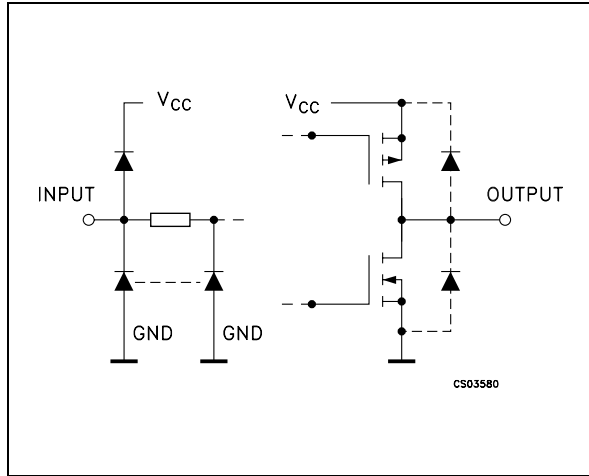

QD. If the LOAD input ( $\overline{\text{LOAD}}$ ) is held "L" DATA input (A - D) are loaded into the internal counter at positive edge of counter clock input (CCK). In the counter mode, internal counter counts up at the positive of the counter clock. If the counter clear inputs ( $\overline{\text{CCLR}}$ ) is held "L", the internal counter is cleared synchronously to the counter clock. The internal counter's outputs are stored in the output register at the positive edge of the register clock (RCK). If the register clear input (RCLR) is held "L" the register is cleared synchronously to register clock.

All inputs are equipped with protection circuits against static discharge and transient excess voltage.
